

ListenTALK

Clear Communication in Higher Education

Problem

Communication and engagement are critical in any learning environment and social distancing and wearing masks can make that communication more difficult. Muffled speech from masks and physical distance can make it harder to hear and understand. Students can't learn if they can't hear the information being presented. Faculty can't answer questions if they can't hear the questions. Hearing clearly is critical to learning.

Challenge

Higher education institutions are realizing that the same physical distance meant to keep everyone safe is putting communication and learning at risk. Do not let COVID-19 safety and prevention measures get in the way of being able to communicate with and engage your students.

ListenTALK is an easy-to-use and portable two-way communication system designed by professional audio engineers. It allows you, your staff, and your students to hear clearly and effectively communicate while wearing masks and staying physically distant.

Solution

ListenTALK is a simple and easy-to-use portable two-way communication system that breaks down communication barriers by delivering sound directly to the user's ear. Using ListenTALK ensures administrative staff, faculty, and students hear crystal-clear audio while maintaining physical distance and wearing masks. The wireless system features a sleek, wearable transceiver (combined transmitter and receiver) that enables group communication with the touch of a button.

Results

- Eliminates communication barriers like masks and physical distance
- Learning happens because everyone can hear clearly
- Easy to setup and sanitize between uses

How it Works

A ListenTALK communication system uses advanced technology to amplify sound resulting in crystal clear audio delivered directly to the listener.

ListenTALK helps students and teachers engage and communicate in environments where noise and physical distance might otherwise limit their ability to hear and understand.

“ListenTALK does exactly what it says it does. It’s straightforward, easy to use and effective. I would definitely recommend the product.”

David Humphrey The University of Tampa
